Harvest date

# MAKALI

## At a glance...

> Firmness: 7.3 kg, Brix: 13.4 %, Acidity: 7 g/l, Starch: 6.2

---

> Chilling requirement slightly higher than Nicoter

---

> Flowering time 3 days before Golden. S-alleles: S5-S19.  
Pollinators: Malus Evereste, Professor Sprenger, Delcorf, Topaz

---

> Commercial license: worldwide, ABCz Group ([www.abcz-group.com](http://www.abcz-group.com))

---

Makali is scab resistant. The presence of the Vf-gene has been confirmed by DNA-marker.

The well balanced sweet-sour flavour and crisp and juicy texture, correspond with the demands of the contemporary consumer.

Furthermore, our thorough research shows that this mid-season variety has a storage capacity and shelf life equal to that of Elstar and Golden.

In short, Makali is a high quality dessert apple that can compete with the likes of Elstar and Golden, with the added bonus of scab resistance.
